ECOTECH

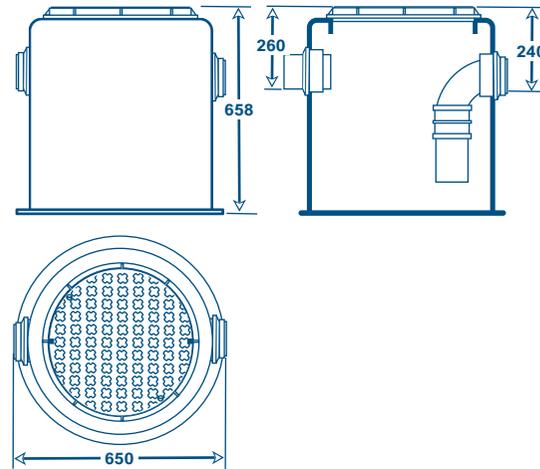

ECO-T

Underground Grease Traps
IDEAL FOR DOMESTIC USE & SMALL CAFES

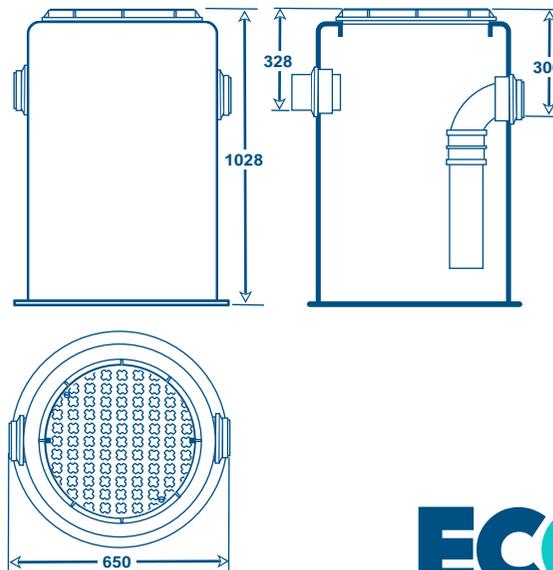

ECO-T grease traps are designed for underground installation and are ideal for domestic applications, and small cafes that have sewage treatment plants or septic tanks installed, providing upstream catchment of FOGs (Fats, Oils and Grease) and so go to support the performance of your Treatment System .

There are two models in the range - 100 litre and 200 litre models.

Model EC1 - 100 Litres

Model EC2 - 200 Litres

How it works

Wastewater from the kitchen sinks enters the trap . This water will typically have FOG's in the flow . When the warm wastewater hits the cold or tepid water inside, immiscible liquids like oils and greases will settle out at the top water level, where they will cool down and begin to solidify.

Solid food matter and fines, being heavier than water will drop to the base of the trap, where they will settle.

Cleaner wastewater will flow through the mid level of the trap and discharge at the outlet pipe.

Features & Design

- Designed in accordance to en1825
- Manufactured from high strength polyethylene
- Lightweight and easy to install.
- All units are supplied with large lockable access cover
- Corrosion Free
- 50 year plus life expectancy
- Full access to all pipework for maintenance
