DRAINSAVER

IN SINK STRAINING BASKET

It is now widely known that Fats, Oils, and Grease (FOG's) **cause problems** when washed down the **drain**, either during food preparation or in the washing up operation. When FOG's cool they will congeal and accumulate in pipelines, thus eventually blocking the drainage system. What is not well known is that food waste particles especially foods such as pasta, potato peelings, and rice.. these starchy foods will also congeal inside your drain. Scrambled egg, pan scraps and flour/dough of any kind will harden up and also help to clog **the system** over time. General food scraps in themselves will lead to premature filling of the grease trap if installed... leading to excessive de-sludging and maintenance. **'This will cost you a significant amount of money annually'** .

By installing one of our new **"DRAINSAVER"** in sink straining baskets, up to 98% of food waste is removed at source, allowing the grease trap to do what it does **best-collect** FOG's (Fats, Oils, and Grease). Plate and pot scraping will be a thing of the past! All Drainsaver units are **non-corrosive** and extremely **robustly** manufactured using 304 stainless steel.

Available in all common sink sizes as shown below.

Model	Waste storage capacity (kg's)	To fit sink sizes	
		Length (mm)	Width (mm)
DS1	3.8	600	500
DS2	3.4	600	450
DS3	3.6	500	500
DS4	2.9	500	400
DS5	2.3	400	400
